

Powerful Remote Surveillance

Distance makes no difference

To Our Valuable Customers,

Thank you for choosing this product. You'll be amazed by those useful functions this product provides, especially for the powerful mobile surveillance support.

Remote access via different platforms is widely supported:

- a) **For mobile platforms**, iPhone®, BlackBerry®, Nokia® Symbian®, Windows® Mobile & Android™ are available with our self-developed and free program, *EagleEyes*, installed.
- b) **For web browsers**, Internet Explorer®, Mozilla® Firefox®, Safari®, Google Chrome™ and Opera are supported.
- c) **Apple's media player**, QuickTime®, is also one tool you can use.

EagleEyes

To monitor and control multiple network devices, you can also install our free CMS software provided within the CD manual.

To know more about our mobile phone program, "EagleEyes", and where to download, please visit:

PTZ NETWORK CAMERA SERIES

USER MANUAL

Please read instructions thoroughly before operation and retain it for future reference.

IMPORTANT SAFEGUARD

All lead-free products offered by the company comply with the requirements of the European law on the Restriction of Hazardous Substances (RoHS) directive, which means our manufacture processes and products are strictly "lead-free" and without the hazardous substances cited in the directive.

The crossed-out wheeled bin mark symbolizes that within the European Union the product must be collected separately at the product end-of-life. This applies to your product and any peripherals marked with this symbol. Do not dispose of these products as unsorted municipal waste. Contact your local dealer for procedures for recycling this equipment.

Disclaimer

We reserve the right to revise or remove any content in this manual at any time. We do not warrant or assume any legal liability or responsibility for the accuracy, completeness, or usefulness of this manual. The content of this manual is subject to change without notice.

Grounding

This is a Safety Class 1 Product (provided with a protective earthing ground incorporated in the power cord). The mains plug shall only be inserted in a socket outlet provided with a protective earth contact. Any interruption of the protective conductor inside or outside of the instrument is likely to make the instrument dangerous. Intentional interruption is prohibited.

Water & Moisture

Do not expose this product to dripping or splashing and that no objects filled with liquids, such as vases, shall be placed on the product.

1. OVERVIEW

1.1 Product Features

- Powerful Remote Surveillance on Multiple Mobile Platforms
 - For mobile device platforms, iPad®, iPod®, iPhone®, BlackBerry®, Nokia® Symbian, Windows® Mobile & Android™ (with their built-in web browsers or EagleEyes)
 - For web browsers, Internet Explorer®, Mozilla Firefox®, Safari®, Google Chrome™ and Opera
 - For operating systems, Windows & Mac
 - For multiple device control, our CMS software, Video Viewer, is provided for free
- Free CMS software with E-Map for multiple devices control & surveillance
- Hot Point support to quickly move the camera to the specified point remotely
- Low-latency video streaming with H.264 compression format
- Advanced Auto Tracking accuracy to follow moving objects
- Rigid & high-speed pan / tilt mechanism with two-million rotation test passed for longer operating lifetime
- Up to 16 preset points & four sequence groups, and Auto Scan
- Excellent outdoor ID design with cable management
- Motion detection and event notification functions
- (AVN284V Only) ONVIF standard supported to simplify system integration

1.2 Package Content

☉ In the camera package:

- | | |
|---|--|
| <input type="checkbox"/> camera module | <input type="checkbox"/> Quick Start |
| <input type="checkbox"/> Power & network cable | <input type="checkbox"/> RJ45 cable extender adapter |
| <input type="checkbox"/> CD-ROM disc (including user manuals & CMS software "Video Viewer") | <input type="checkbox"/> Accessory Pack |

☉ In the bracket package:

- | | |
|-------------------------------------|---|
| <input type="checkbox"/> Housing | <input type="checkbox"/> Bracket |
| <input type="checkbox"/> Dome Cover | <input type="checkbox"/> Accessory pack |

1.3 Dimensions

1.4 Cable Overview

CABLE	DESCRIPTION
RJ45 network cable	Connect it to the supplied RJ45 cable extender adapter for cable extension, and prepare another RJ45 network cable with suitable length for your connection.
Reset wires	Remove the insulating coating of these two wires, and twist them together to reset default. This will reset all parameters, including the IP address to factory default settings. Note: Disconnect power before twisting these two wires together, and connect to power again for reset default.
Power cable	Connect to DC12V power supply.

2. BEFORE USING YOUR NETWORK CAMERA

Before using the network camera, make sure:

- 1) You have installed the supplied CMS software, "Video Viewer".
- 2) You have configured the network settings, and the network connection is fine.

If not, please refer to your the installation guide.

This network camera can be accessed via our supplied CMS software "Video Viewer", or the web browser "Microsoft Internet Explorer" or "Mozilla Firefox" depending on different using situations.

- To check or configure up to 16 surveillance devices simultaneously with the record function, please use "Video Viewer".

For details about using Video Viewer, please refer to "3. ACCESSING THE CAMERA VIA VIDEO VIEWER" at page 4.

- To check or configure this network camera only, it's recommended to use a web browser, such as "Microsoft Internet Explorer" or "Mozilla Firefox".

For details about using the web browser, please refer to "4. CAMERA CONFIGURATIONS VIA YOUR WEB BROWSER" at page 12.

3. ACCESSING THE CAMERA VIA VIDEO VIEWER

3.1 Accessing the camera

Step1: Double-click “” on your PC desktop to open Video Viewer. By defaults, the “Address Book” panel will be displayed on the right side of the control panel.

Step2: Click “” to select the IP address of the camera you intend to connect, and double-click it.

Step3: The live view is displayed in the Video Viewer.

3.2 Control panel overview

Two control panels are available and can be switched depending on your using habit.

3.2.1 Simplified Version (Default)

3.2.2 Full Function Version

3.2.3 Main Button Overview

Button		Function	Description		
Simplified	Full Function				
		Address Book	Click to show the predefined IP address(es). You can add, remove or search the IP address to log in the DVR remotely.		
		Miscellaneous Control		Remote Config	Click to go to the detailed system configuration.
				Record Setting	Click to go to the detailed record setting. For details, please refer to "3.3.1 Record" at page 6.
				Custom Setting	Click to choose the language of this program, or set the password when activating this program. The changes will take effect when this program is closed and executed again.
		Log	Click to view all event and recording logs, search the desired log(s) by date, or playback the recording of the selected log.		
		Record / Record Stop	Click to start / stop the manual recording. The record button will be disabled when the reserved disk capacity set in "Record Setting" is larger than the current disk capacity. For details, please refer to "3.3.1 Record" at page 6.		
		Snapshot	Click to take a snapshot of the current view. The snapshot will be saved in the path you specified in "Record Setting".		
		Information	Click to show the current network connection details.		
		PTZ Control	Click to enter the PTZ control panel. For details, please refer to "3.3.5 PTZ Control" at page 11.		

3.3 Frequently-used functions

3.3.1 Record

To record remotely, click “” or “” → “” to go to the “Record Setting” page.

In the “Record Setting” page, you can set the following items:

- Record type
- Pre- / post-event record
- Record time setting
- Record path

Note: The record function will be disabled when the reserved disk capacity in “Reserved(MB)” is larger than the current disk capacity in “Free(MB)”.

When “Manual” is checked, click “” or “” on the main control panel to start the manual recording immediately, and the recordings will be saved in the location specified in “Record Path”.

When “Motion” and / or “Alarm” are checked, the recording function will be enabled for any motion or alarm event, and the recordings will be saved in the location specified in “Record Path”.

3.3.2 Playback

To play a recording, click “” or “”, and select the “Record” tab. A list of all the recordings will be shown by defaults, and you can also sort out the logs you want to speed up the search time.

3.3.3 Firmware Upgrade

This function is used when users need to upgrade the network camera for function scalability.

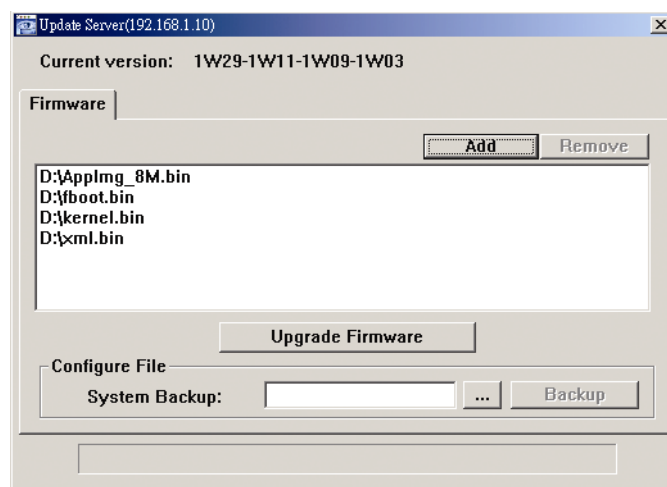

Note: Before using this function, make sure you have the correct upgrade files provided by your installer or distributor.

Step1: Click “”, and select the IP address of your network camera in the address book.

Step2: Click “” to show the upgrade page, “Update Server”.

Step3: Click “Add” to browse to the upgrade files.

Step3: Back up all your configurations if necessary.

Firmware upgrade might reset all configurations to default. To keep all your configurations, select “System Backup” to back up all your configurations and a “system.bin” file will be generated.

Note: To restore all your configurations after system upgrade, upgrade “system.bin”.

Step4: Click “Upgrade Firmware” to start firmware upgrade.

Note: It takes a few minutes to finish the upgrade process. Do not disconnect the power during firmware upgrade, or the upgrade may be failed. The camera will reboot after the upgrade.

Step5: Select the IP address of the camera and click “” again to check if the firmware is upgraded.

3.3.4 E-Map

Video Viewer is also a Central Management System (CMS) software, which allows network device control & management for up to 16 devices simultaneously.

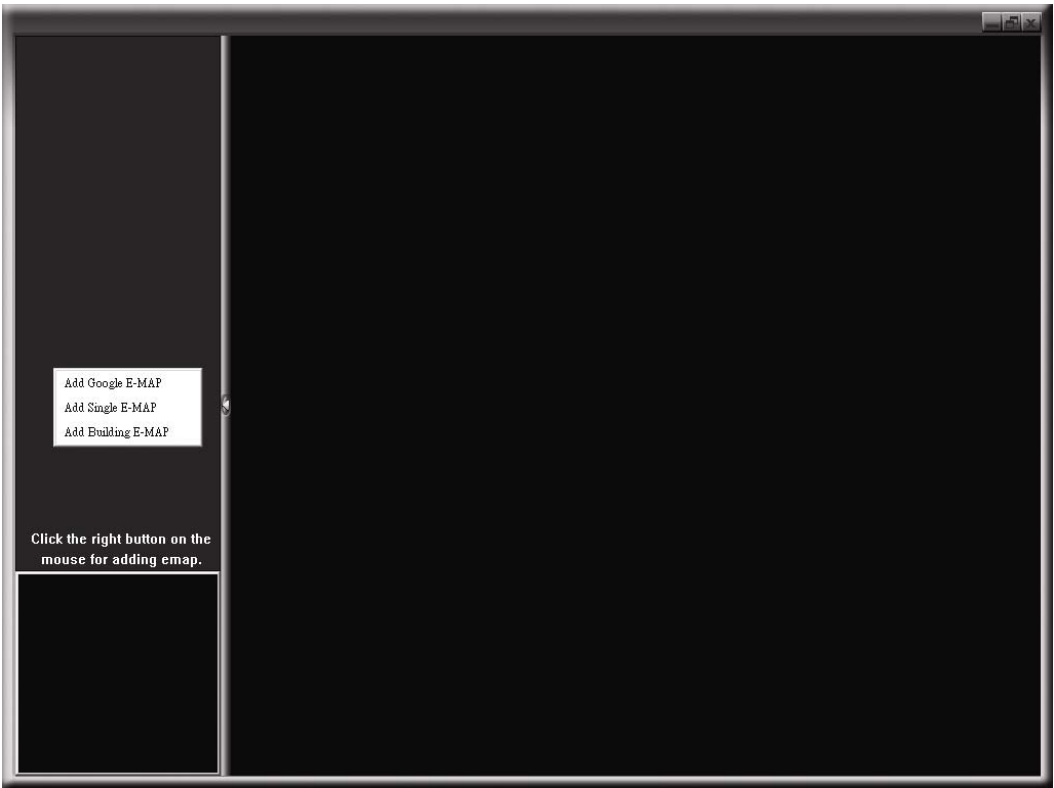

Note: Before using this function, make sure Video Viewer is connected to all the devices (up to 16) you want to monitor.

E-Map is **ONLY** available when the control panel is switch to the full function version.

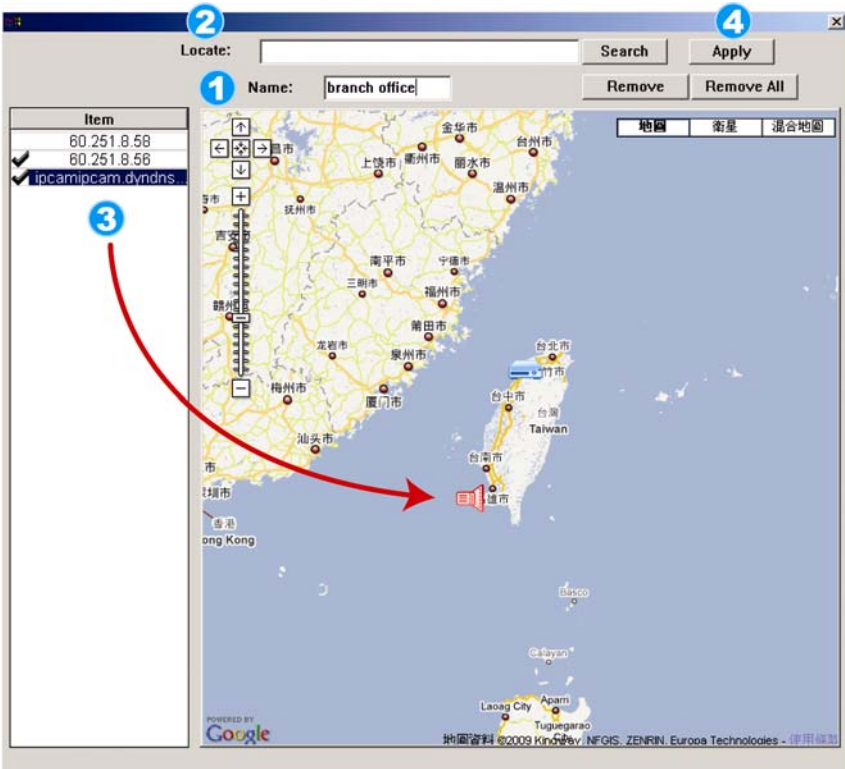

How to Add an E-Map Group

STEP1: In the simplified version, click “” to switch the control panel to the full function version, and click “” to enter the E-Map page as follows.

Note: To know where the buttons are, please refer to “3.2.1 Simplified Version (Default)” at page 4, and “3.2.2 Full Function Version” at page 5.

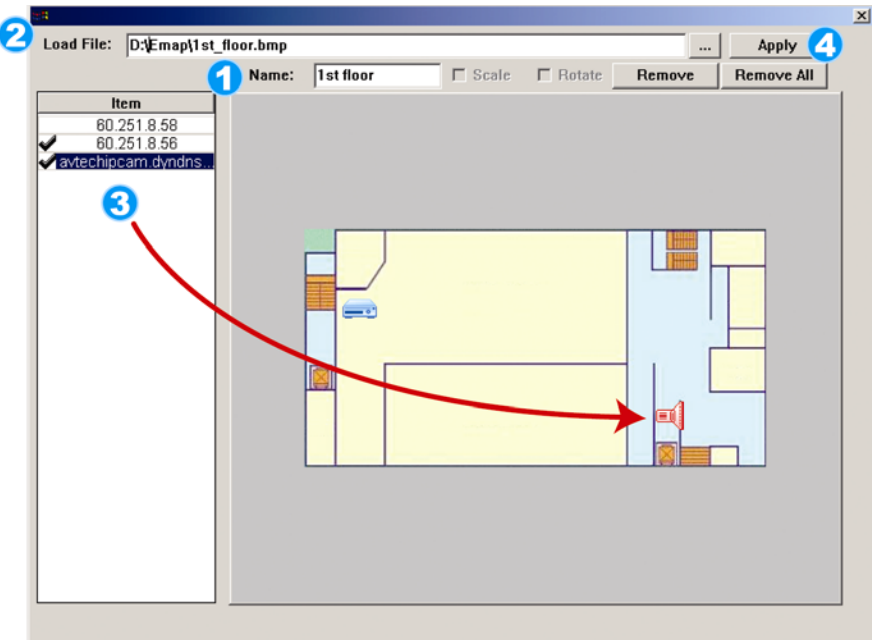

STEP2: Right-click to show the shortcut menu on the top-left panel, and select the E-Map group you want to add. There are three E-Map groups you can add: Google E-MAP, Single E-MAP, and Building E-MAP.

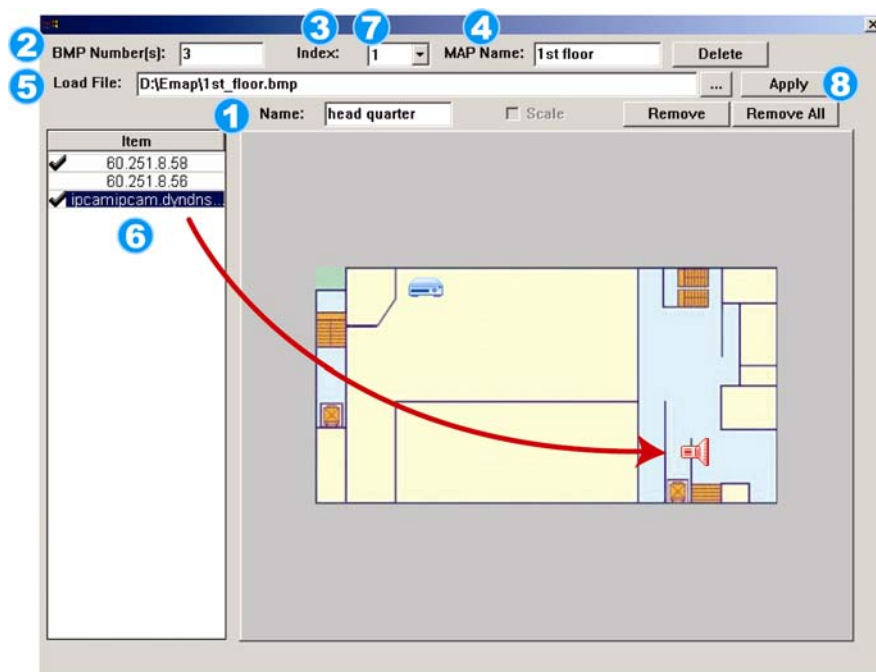

How to add a Google E-Map group:

- 1 Enter the name of this Google E-Map group.
- 2 Enter a specific address or landmark, and click “Search”.
OR
Move to the map and drag to the location you want.
- 3 Click and drag the IP address to where it’s located in the current level.
- 4 Click “Apply” to save and finish.

How to add a single E-Map group:

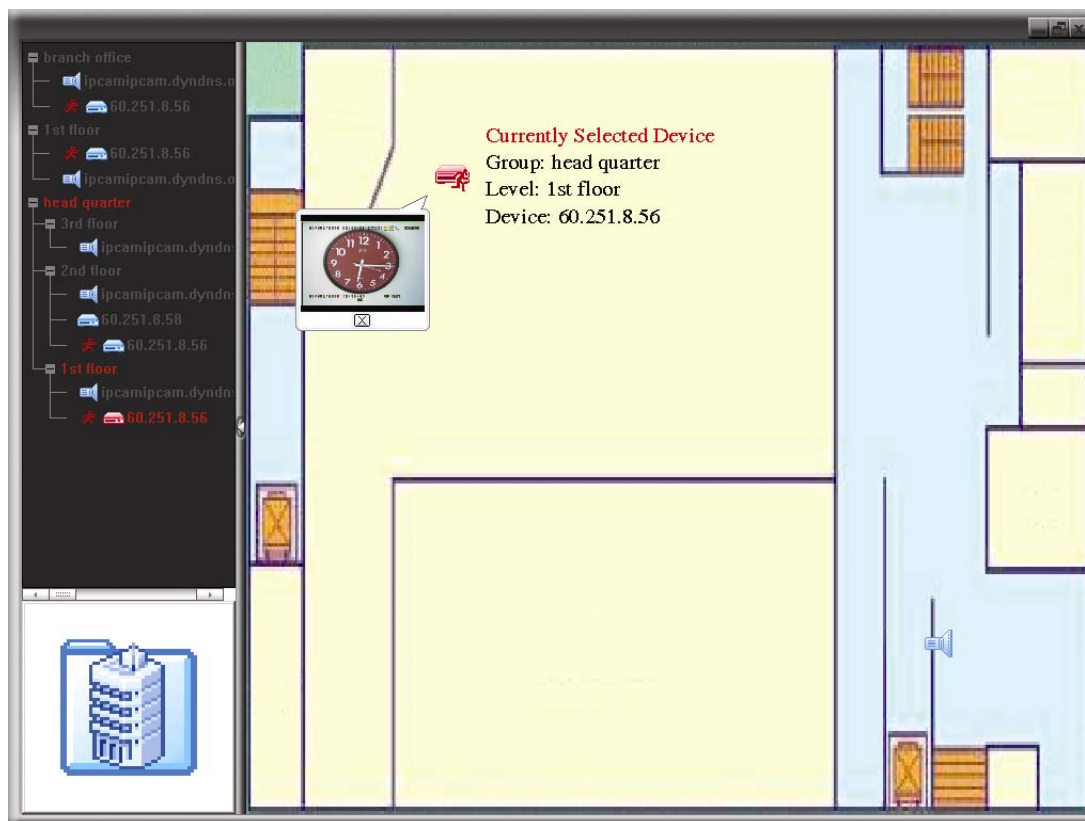

- 1 Enter the name of this single E-Map group.
- 2 Click “...” to browse the map file in BMP or JPEG.
- 3 Click and drag the IP address to where it’s located in the current level.
- 4 Click “Apply” to save and finish.

How to add a building E-Map group:

- 1 Enter the name of this building E-Map group.
- 2 Enter the total levels of this building.
- 3 Select the level of the building from the drop-down list.
- 4 Enter the name of the level.
- 5 Click “...” to browse the map file in BMP or JPEG.
- 6 Click and drag the IP address to where it's located in the current level.
- 7 Go back to STEP 3 to select other level of the building, and repeat from STEP 3 to 6 until the setup for all levels are finished.
- 8 Click “Apply” to save and finish.

STEP3: When the E-Map group is created, you will see the tree on the top-left panel, showing all the devices you've added to this group.

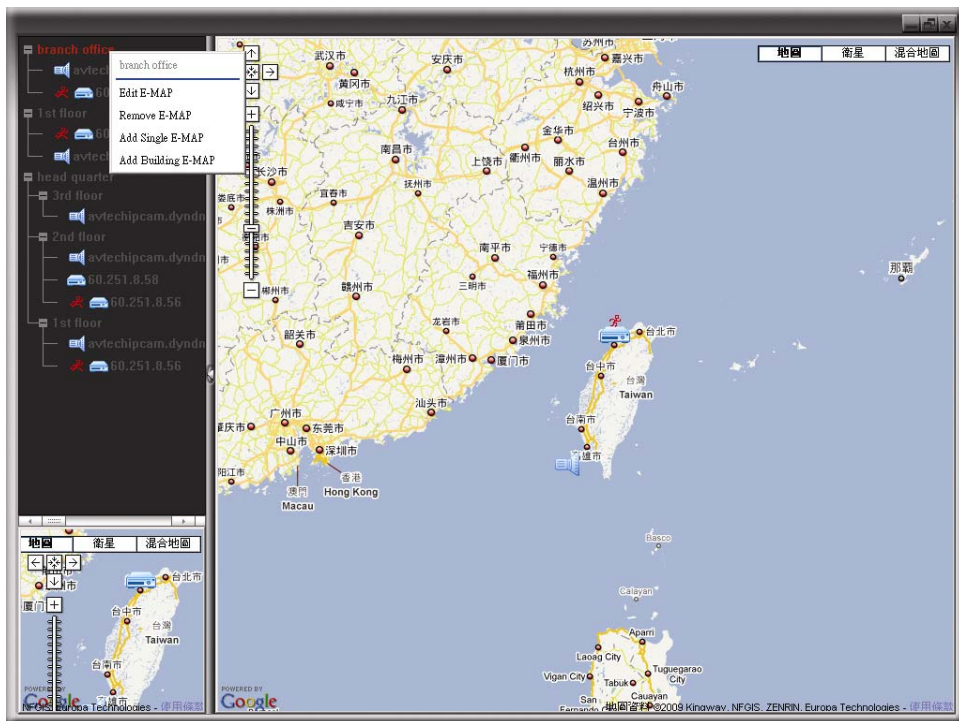

Icon	Description
	The connected device is camera. When it's selected, it will become red.
	The connected device is DVR. When it's selected, it will become red.
	For any motion or alarm event, it will appear on the screen to catch your attention. To know what's happening quickly, double-click the device icon on the E-Map to show the live view.

How to Edit / Remove an Existing E-Map Group

➤ For Google E-Map Group

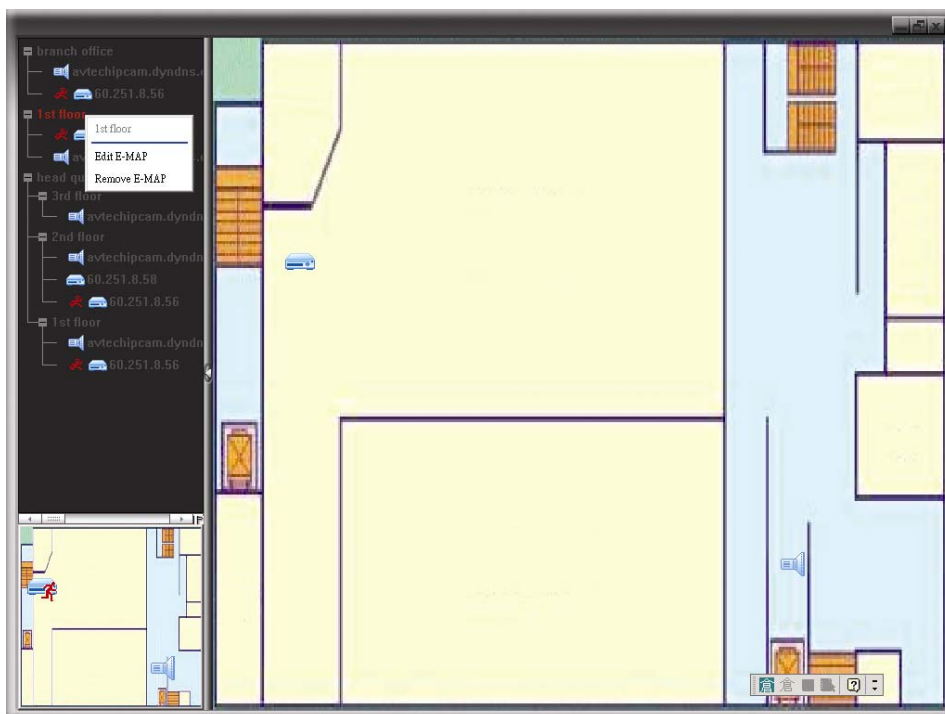

Right-click on the group name to show the shortcut menu list, and select “Edit E-MAP” or “Remove E-MAP” as needed.

You can also add a single E-Map group (Add Single E-MAP) or Building E-Map group (Add Building E-MAP) into the existing Google E-Map group.

➤ For Single E-Map Group

Right-click on the group name to show the shortcut menu list, and select “Edit E-MAP” or “Remove E-MAP” as needed.

➤ For Building E-Map Group

Right-click on the group name to show the shortcut menu list, and select “Edit Building E-MAP” or “Remove E-MAP” as needed.

3.3.5 PTZ Control

Click  or  to display the PTZ control panel as follows.

Simplified Version

Full Function Version

Function	Button		Description
	Simplified	Full Function	
Preset Point	--	--	Click the numbering of the preset point you want to move the PTZ camera to the selected preset point. To set preset points, please refer to "4.4.2 Preset" at page 20.
Auto Pan			Click to activate the auto function. Before using it, you need to assign a specific function that will be enabled when "AUTO" is clicked. For details, please refer to "4.4.3 Cruise" at page 21.
Auto Tracking			Click to activate the auto tracking function. For setting details, please refer to "4.4.4 Auto Tracking" at page 22.
Zoom In / Out	 / 	 / 	Click to zoom in / out the image.
Focus Near / Far	 / 	 / 	Click to adjust the focus of the image.
Max Zoom In / Out	 / 	 / 	Click to zoom in the image to the largest / zoom out the image to its original size.
Arrow Keys	--	--	Click to move the camera lens up / up-left / down / up-right / left / down-right / right / down-left.
Turbo Step			Speed up the menu selection from 1 to 10. Note: When this function is enabled, the supported buttons will turn to blue. Ex: If the value of the turbo step is set to 5, one mouse-click will function as 5 mouse-clicks when you click the arrow keys. To use this function, you need to set it in the camera configuration page first. For details, please refer to "4.5.1 General" at page 26.
Auto Move			Click to enable the auto move function. It allows the camera to move to the direction where your cursor stays.

4. CAMERA CONFIGURATIONS VIA YOUR WEB BROWSER

Users can also access the network camera via a web browser, such as Microsoft Internet Explorer, Mozilla Firefox, Google Chrome and Safari.

Note: It's recommended to consult with your installer before changing system configurations.

Note: You need to be the supervisor to enter the system configuration page. If not, please re-log into the camera with the supervisor user level.

However, the web browser is only available for single device access. If users want to access more than two devices through one interface, it's recommended to use our supplied software, Video Viewer. For details, please refer to "3. ACCESSING THE CAMERA VIA VIDEO VIEWER" at page 4.

Before using the network camera, make sure you have configured the network settings and have the IP address, user name and password used for accessing the camera in hand. If not, please refer to the installation guide.

4.1 Accessing the camera

Step1: Open your web browser, and key in <http://ipaddress:portnum> in the URL address box.

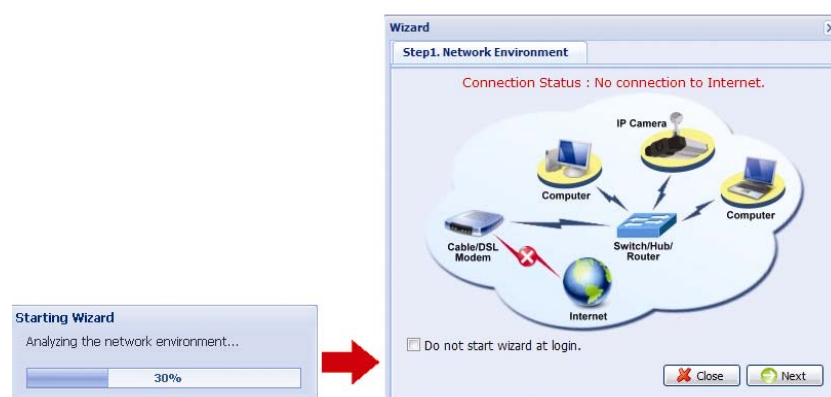

For example, for IP address 60.121.46.236 and port No. 888, please key in "<http://60.121.46.236:888>" into the URL address box, and press "Enter".

Step2: In the login page, key in the user name and password, and enter the security code from the image below. Then, click "LOGIN".

Step3: The wizard is then starting analyzing your network environment, and shows your network environment.

- To continue setting the password, date & time, and network, click "Next" and follow the step-by-step instructions.
- To skip the wizard and directly access the camera live view, click "Close".
- To directly access the camera live view without starting the wizard for the login next time, check "Do not start wizard at login".

Step3: When the login is successful, you'll see the live view.

4.2 Control panel overview

4.2.1 Live View Panel

Max. Zoom-in / out		Supervisor / Power User / Normal User	Click to zoom in the image to the largest / zoom out the image to its original size.
Focus near / far		Supervisor / Power User / Normal User	Click to adjust the clearness of the video images.
Auto Tracking		Supervisor / Power User / Normal User	Click to activate the auto tracking function. For setting details, please refer to "4.4.4 Auto Tracking" at page 22.
Auto Mode		Supervisor / Power User / Normal User	Click to activate the auto function. Before using it, you need to assign a specific function that will be enabled when "AUTO" is clicked. For details, please refer to "4.4.3 Cruise" at page 21.
Auto Move		Supervisor / Power User / Normal User	Click to enable the auto move function. It allows the camera to move to the direction where your cursor stays.
Flip		Supervisor / Power User / Normal User	Click to rotate the image 180° counterclockwise when necessary.
Full Screen		Supervisor / Power User / Normal User	Click to display the image in full screen.
Snapshot		Supervisor / Power User / Normal User	Click to take a snapshot for the current view, and a new browser window will be opened to display the captured image.

Function	Icon	User Level	Description
Media Type	--	Supervisor / Power User / Normal User / Guest	<p>Select the web transmission format from the drop-down list: H.264 / MPEG-4 / Motion JPEG / QuickTime</p> <p>For users using Mozilla Firefox, only "QuickTime" is selectable.</p> <p>QuickTime is Apple Inc.'s multimedia software. You need to have QuickTime installed in your operating system before selecting "QuickTime". When it is selected, you will be prompted to enter the user name and password to access the camera.</p>
Video Resolution		Supervisor / Power User / Normal User	Select the video resolution from the drop list: 4CIF / CIF.
Video Quality	--	Supervisor / Power User / Normal User	Click & drag the slider to select the video quality: Basic / Normal / High / Best.

4.2.2 System Configuration Panel

Click “Configuration” to enter the configuration page.

Note: You need to be the supervisor to enter the system configuration page. If not, please re-log into the camera with the supervisor user level.

The functions are categorized into three menus: Network, Camera and General.

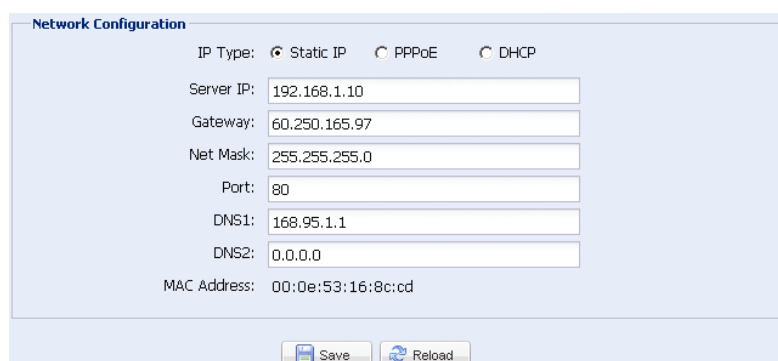

- For details about “Network”, please refer to “4.3 Network” at page 16.
- For details about “Camera”, please refer to “4.4 Camera” at page 20.
- For details about “General”, please refer to “4.5 General” at page 26.

Main Menu	Sub-Menu	Reference
Network	Network	Configure network settings.
	QoS	Limit the data flow for live streaming.
	DDNS	Enter DDNS information when the network type is PPPOE or DHCP.
	SNTP	Synchronize your camera time with the networked computer systems.
	FTP	Enter the FTP information for event notifications when “FTP” is chosen in “General” → “Trigger”.
	Mail	Enter Email information for event notifications when “Email” is chosen in “General” → “Trigger”.
	SMS	Enter text messaging information for SMS notifications when “SMS” is chosen in “General” → “Trigger”.
	Filter	Choose to permit or block the IP address(es) which can access this camera.
	UPnP	<i>*Suitable for Windows-based operating system.</i> 1. Allow this camera to be detected among devices within the same network area for easy and quick usage. 2. Configure port mapping.
	Bonjour	<i>*Suitable for Apple Mac-based operating system.</i> Allow this camera to be detected among devices within the same network area for easy and quick usage.
Camera	System	1. Set the OSD display. 2. Set the ID and baud rate. 3. Set the pan and tilt speed.
	Preset	Set the preset points for the DPTZ function.
	Cruise	Set the cruise mode when the auto mode is enabled: Sequence or Auto Pan.
	Auto Tracking	Set the surveillance area for auto tracking, and the tracking timeout.
	Color	Adjust the color performance.
	Time	Set daylight saving time and the current time.
	Advance	Adjust the camera parameters if necessary.
General	General	1. Select the language of the web browser. 2. Check the MAC address of the camera. 3. Lock camera access after the specified time.
	Server Log	Check the system event logs.
	Online	1. Check current online user(s). 2. Set anonymous login 3. Set image code verification at login
	Account	1. Create a new user account with different access privilege. 2. Modify or delete an existing user account.
	Trigger	1. Enable / disable motion detection. 2. Set the motion detection area. 3. Select the event notification method.
	Video	Select video file size and image quality.
	Google Maps	Allow you to know where the network camera is.
	Upgrade	Check the current firmware version and upgrade.

4.3 Network

4.3.1 Network

You can set the network configuration of the network camera depending on your network type. For details, please refer to your installation guide.

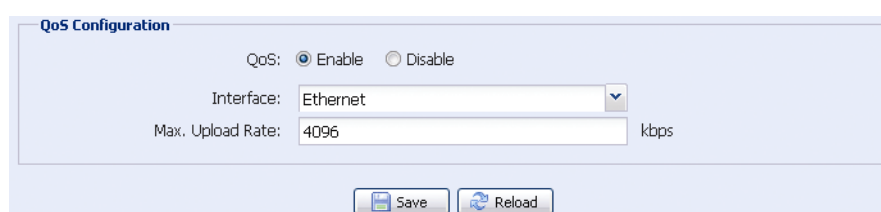

The Network Configuration interface shows options for IP Type (Static IP, PPPoE, DHCP). Static IP is selected. Fields include Server IP (192.168.1.10), Gateway (60.250.165.97), Net Mask (255.255.255.0), Port (80), DNS1 (168.95.1.1), DNS2 (0.0.0.0), and MAC Address (00:0e:53:16:8c:cd). Save and Reload buttons are at the bottom.

4.3.2 QoS

QoS, Quality of Service, is the ability to control the data flow for real-time streaming. This function is important if your network bandwidth is insufficient and you have other devices to share the network bandwidth.

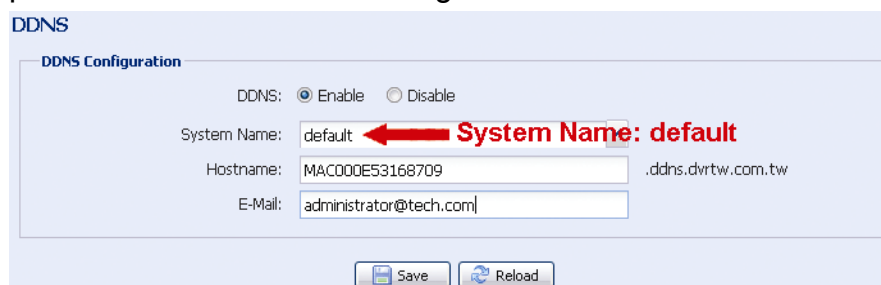

Check “QoS Enable”, and set the max. upload rate from 256 to 10240 kbps.

The QoS Configuration interface shows QoS set to Enable. Interface is set to Ethernet. Max. Upload Rate is set to 4096 kbps. Save and Reload buttons are at the bottom.

4.3.3 DDNS

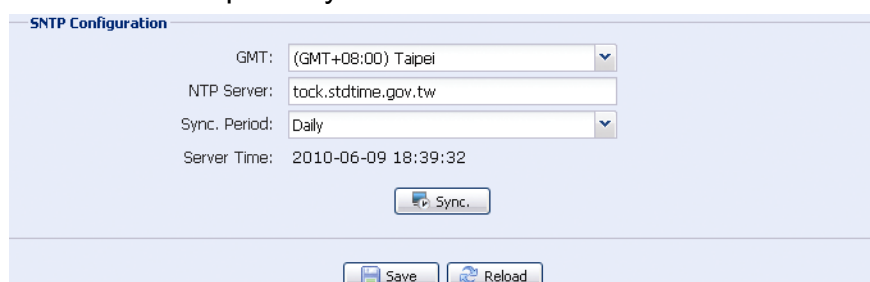

Select “On” when the selected network type in “Network” is “PPPOE” or “DHCP”. For details, please refer to the installation guide.

The DDNS Configuration interface shows DDNS set to Enable. System Name is default, Hostname is MAC000E53168709, and E-Mail is administrator@tech.com. A red arrow points to the System Name field with the text “System Name: default”. Save and Reload buttons are at the bottom.

4.3.4 SNTP

SNTP (Simple Network Time Protocol) is used to synchronize your camera time with the networked computer systems.

The SNTP Configuration interface shows GMT set to (GMT+08:00) Taipei, NTP Server set to tock.stdtime.gov.tw, Sync. Period set to Daily, and Server Time set to 2010-06-09 18:39:32. A Sync button is present. Save and Reload buttons are at the bottom.

Function	Description
GMT	Once users choose the time zone, the network camera will adjust the local area time of the system automatically.
NTP Server	Simply use the default SNTP server (For example, tock.stdtime.gov.tw) or change to another server with which users are familiar.
Server Time	Click and the network camera will synchronize the time with the network time.

4.3.5 FTP

Enter the detailed FTP information and click “Save” to confirm. The information you set here will be applied when “FTP” is selected in “General” → "Trigger".

Function	Description
SMTP Server	Enter the SMTP server address provided from your e-mail system supplier.
Port	Enter the port number provided from your e-mail system supplier. If this column is left blank, the e-mail server will use port 25 to send e-mails.
Mail From	Enter the entire mail address to ensure e-mails will not be blocked by SMTP.
SSL Encryption	Select “Yes” if your e-mail server is using SSL encryption to protect your e-mail content from unauthorized access.
Verify Password	Some mail servers are required to verify the password. Please enter the “user name” and “password”.
E-Mail Address List	Add the e-mail address(s) of the assigned recipient(s).
Test	When all information is entered, click “Test Mail” to try if the recipe.

4.3.7 SMS

Note: Before using this function, you need to apply an API ID from the mobile messaging company, Clickatell, and you will be charged starting from the 11th message. For details, please refer to "APPENDIX 2 API ID APPLICATION FOR SMS MESSAGING" at page 32.

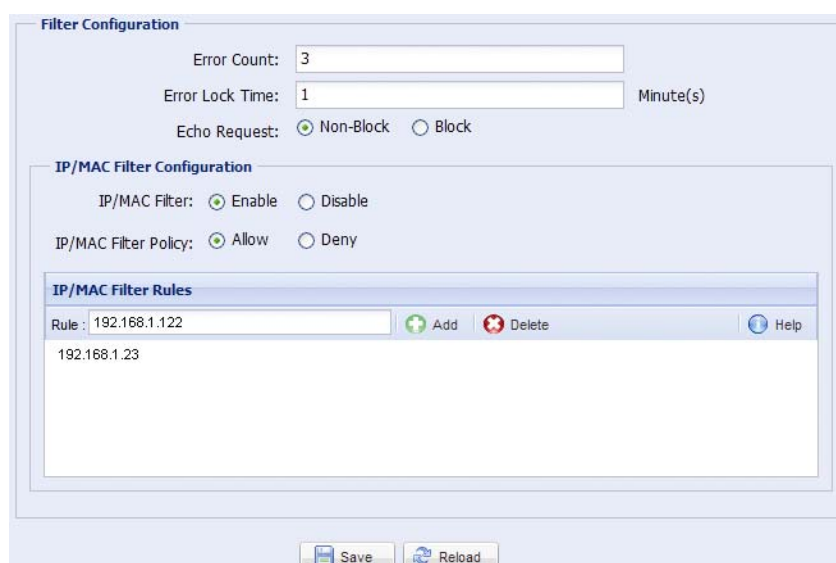

Enter the detailed information needed for text messaging, and click "Save" to confirm. The information you set here will be applied when "SMS" is selected in "General" → "Trigger".

Function	Description
System	The text messaging service provider is Clickatell.
User name / Password	Enter the account user name and password you created in Clickatell.
API ID	Enter the API ID you applied from Clickatell.
Recipient	Click "Add" to enter the phone number, including the country code, to receive the text message. Five sets of phone numbers are allowed.
Transfer Interval	Set the interval time in minutes between two-message sending. The options are 0, 15, 30 & 60.
Reset Counter	Click to restart the text messaging, and the SMS will be sent after the specified time interval since you click this button.
Message	Enter the text content (up to 70 characters) you want to send with the text message.
Test SMS	To know whether your SMS setting is correct, click this button to immediately send a SMS to your phone. Note: This testing is not free and you will be charged for SMS sending base on your local rate.

4.3.8 Filter

Choose to permit or block the IP address(es) which can access this camera, and click "Save" to confirm.

Function	Description
■ Filter Configuration	
Error Count	Set the maximum count for login failure. When the maximum count is reached, the IP address trying to access the network camera will be locked.
Error Lock Time	Set the lock time in minutes when the maximum count of error login for an IP address is reached.
Echo Request	Select "Non-Block" to allow other users to use the ping command to detect the IP address of your network camera, or "Block" to deny the ping command request.
■ IP/MAC Filter Configuration	
IP/MAC Filter	Choose to enable or disable the filter function.
IP/MAC Filter Policy	If "Enable" is selected, choose whether you want to permit (Allow) or block (Deny) the IP address list below.
■ IP/MAC Filter Rules	
Rule	<ul style="list-style-type: none"> To add an item to the IP address list, key in the IP address in "Rule", and click "Add". To remove an existing item in the IP address list, click the item you want to remove, and click "Delete".

4.3.9 UPnP / Bonjour

"UPnP" stands for "Universal Plug and Play", which allows devices to connect seamlessly in the home and corporate environments and simplify installation of computer components, and is only suitable for Microsoft Windows-based operating system.

"Bonjour" functions the same as "UPnP", but it's only suitable for Apple Mac-based operating system.

➤ UPnP

➤ Bonjour

Check "Enable" to allow the network camera to be detected among devices within the same network area, and set the identification name of the camera in "Friendly name".

When this function is activated, the other PC within the same domain as this camera will be able to search this camera in:

- "Network Neighbor" with the identification name set in "Friendly name" for Windows-based PC, or
- "🔍" (finder) or "Bookmark" with the identification name set in "Device Name" for Mac-based PC.

Double-click it to quickly open the web browser for camera access.

Port Mapping (Available only in UPnP)

When your device is connected to Internet via a router and you need to additionally access the router to configure port mapping, this function can eliminate the need to additionally access the router for port forwarding.

Note: Before using this function, make sure the UPnP function of your router is also enabled.

When “Port Mapping” is set to “Enable”, the system will automatically assign an IP address or port number for you if no IP address or port number is entered.

Port Mapping Configuration

Port Mapping: ☒ Enable ☐ Disable

How to delete an existing preset point

In “Available Positions”, select the name of the point you want to check from the drop-down list, and click “Remove”.

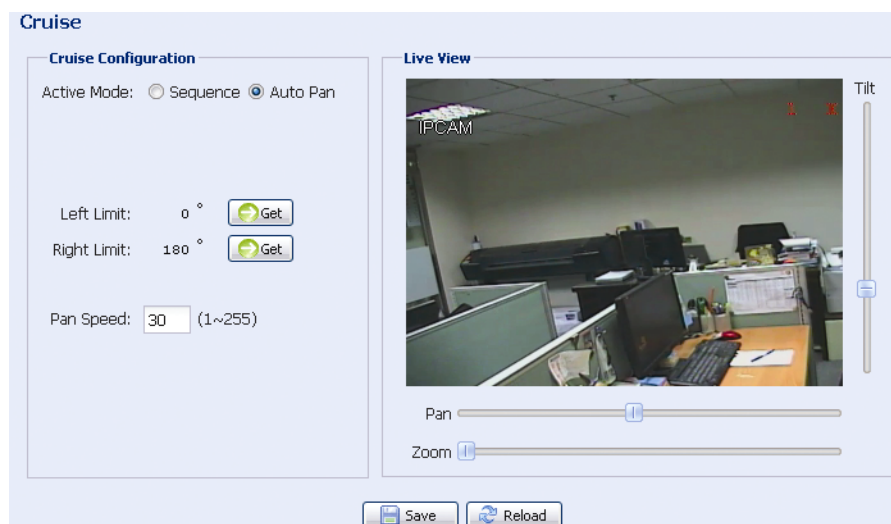

4.4.3 Cruise

Note: Before using this function, make sure you have finished setting several preset points.

Here defines how the auto mode of the camera is going to work when  is selected: Sequence or Auto Pan.

Auto Pan

When “Auto Pan” is selected here and  is clicked on the live view page, the camera will start panning.

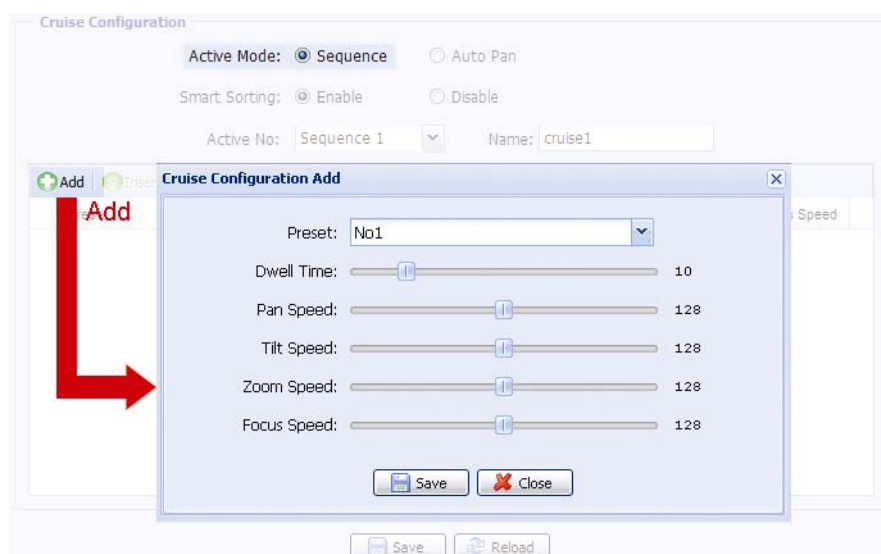

Sequence

When “Sequence” is selected here and  is clicked on the live view page, the camera will start patrolling each preset point defined in “Sequence”.

Step1: Click “Add” to choose a preset point from the drop-down list, and select the duration to stay at this point from 1 ~ 60 minutes.

Then, click “Save” to confirm.

Step2: Click “Add” again to add more preset points. When all the points are added, click “Save” to confirm.

Frame Rate	The frame rate allowed to each viewer can be adjusted to adapt to the bandwidth on the network. Set the desired image frequency to the maximum (FULL) or to a specified frame rate (1/2; 1/3; 1/4; 1/5; 1/10; 1/15; 1/20; 1/25; 1/30). The actual frame rate depends on the actual network connection, and may be lower than the specified one.

4.5.7 Google Maps

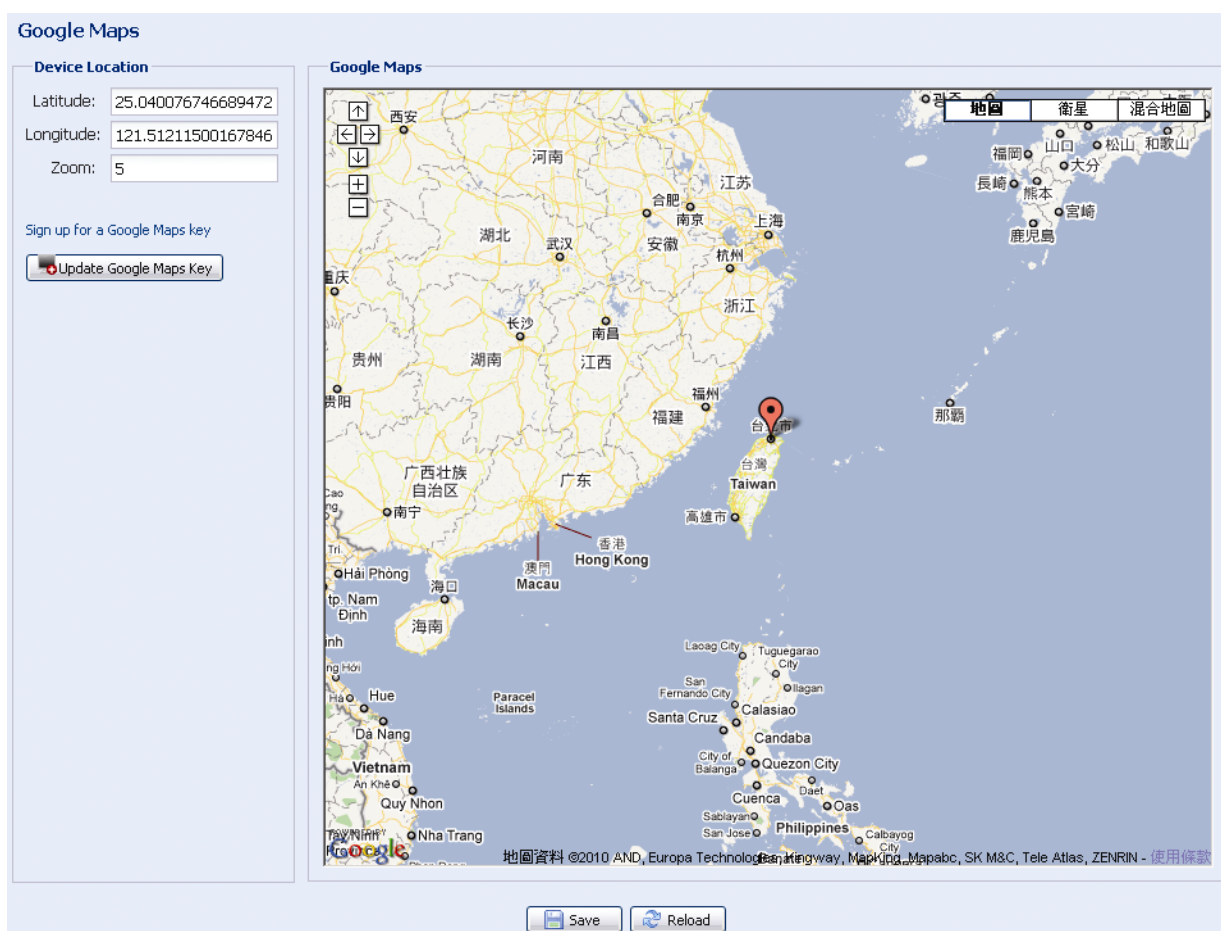

This function is used to let you know where the network camera is.

The system will prompt you to apply a Goole Maps Key if your access is denied. Please follow the instructions below when you’re denied:

Step1: Click “Sign up for a Google Maps key” to enter the application page.

Step2: Check the terms and conditions, and enter the IP address of the network camera. Then, click “Generate API Key”.

Step3: Copy the generated API key, and click “Update Google Maps Key” on the web browser to paste it.

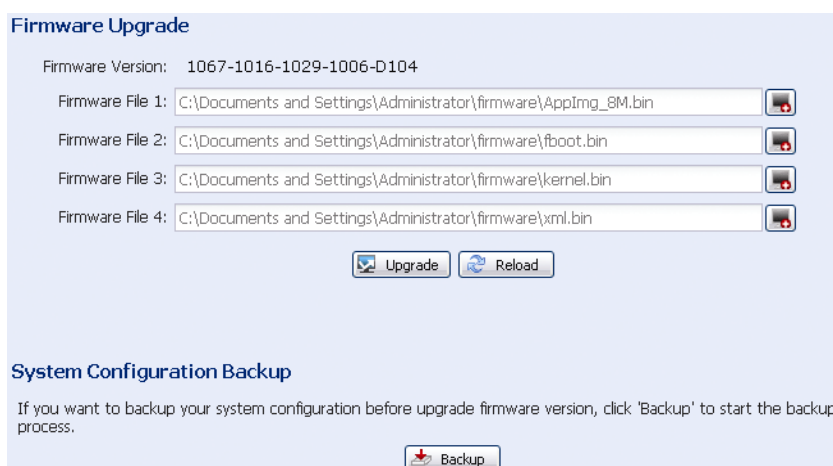

4.5.8 Upgrade

This function is used when users need to upgrade the network camera for function scalability.

Note: Before using this function, make sure you have the correct upgrade files provided by your installer or distributor.

Step1: Click “” to browse to where you save the upgrade files, and select them one by one until all files are selected (up to four files).

Step2: To make a system backup for restore all camera configurations later, click “Backup”.

Step3: Click “Upgrade” to start system upgrading.

Note: It takes a few minutes to finish the upgrade process. Do not disconnect the power during firmware upgrade, or the upgrade may be failed. The camera will reboot after the upgrade.

Event Notification	FTP / Email / SMS		
Minimum Web Browsing Requirements	<ul style="list-style-type: none">● Pentium 4 CPU 1.3 GHz or higher, or equivalent AMD● 256 MB RAM● AGP graphics card, Direct Draw, 32MB RAM● Windows 7, Vista & XP, DirectX 9.0 or later● Internet Explorer 7.x or later		

** The specifications are subject to change without notice.

** Dimensional tolerance: ± 5mm

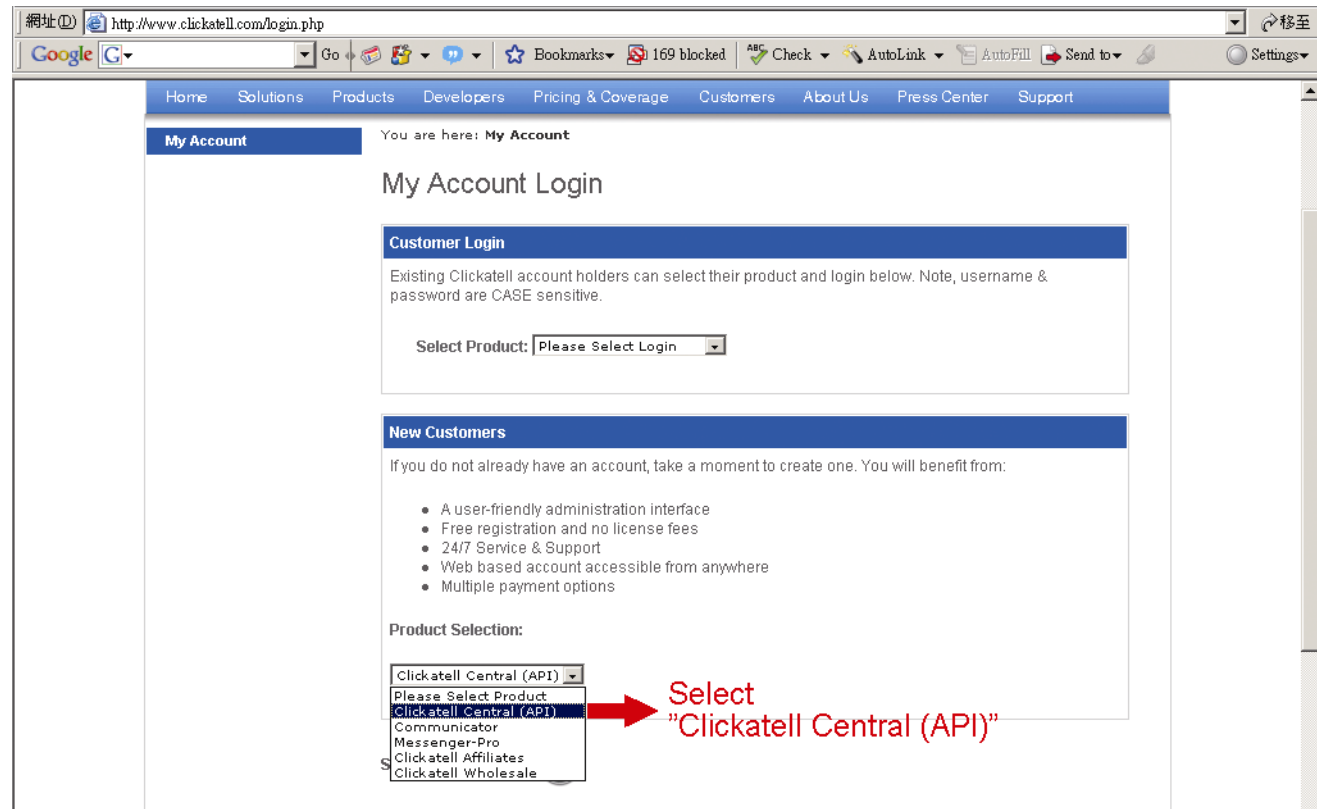

APPENDIX 2 API ID APPLICATION FOR SMS MESSAGING

To allow the camera automatically sending a text message when an event happens, you need to apply an API ID from Clickatell, one mobile messaging company, first.

Note: The SMS messaging is not totally free. You will be charged starting from the 11th message.

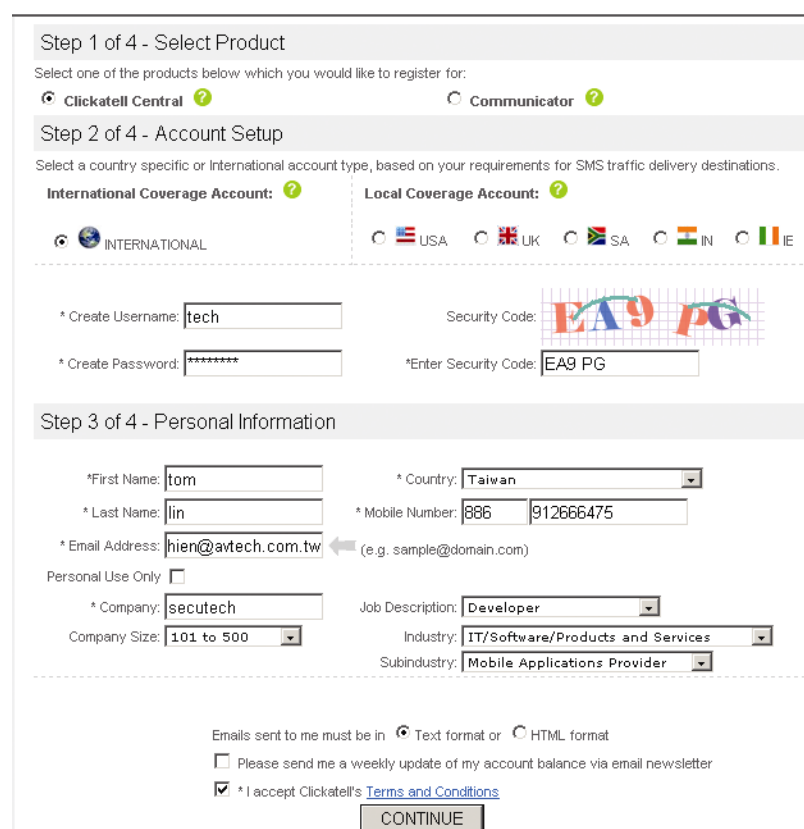

Please follow the steps below for application.

Step1: Go to <http://www.clickatell.com/login.php>. In “New Customers”, select “Clickatell Central (API)” from the drop-down list.

Step2: Fill in your information to create an account, and click “CONTINUE”.

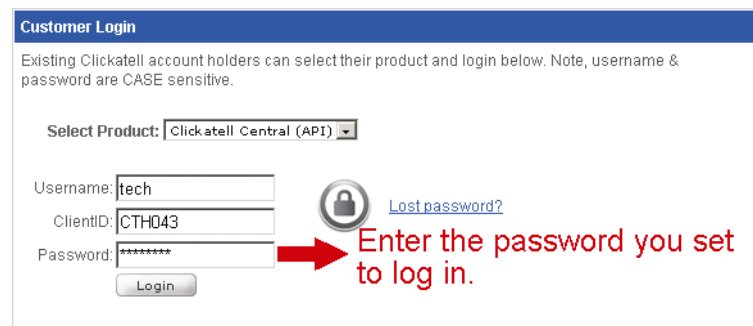

Note: Note down the user name and password, and the mobile phone number you specified here for SMS notification setting later.

Step2: When the account is created, the system will automatically send an Email to your specified Email address and ask you to activate your account.

Click the link in the Email to complete account activation, and enter the login page as follows.
Enter the password you set, and click “Login”.

My Account Login

Customer Login

Existing Clickatell account holders can select their product and login below. Note, username & password are CASE sensitive.

Select Product: Clickatell Central (API)

Username:

ClientID:

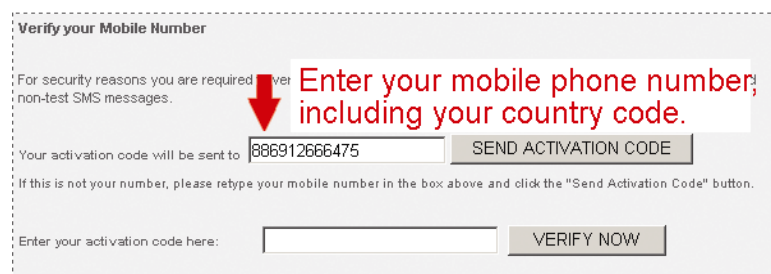

Password:

[Lost password?](#)

Enter the password you set to log in.

Step3: Enter the mobile phone number (including your country code) you want the text message to be sent, and click “SEND ACTIVATION CODE”. The system will send an activation code to that number for verification.

Check if you receive a text message from Clickatell.

Verify your Mobile Number

For security reasons you are required to verify your mobile number before you can use non-test SMS messages.

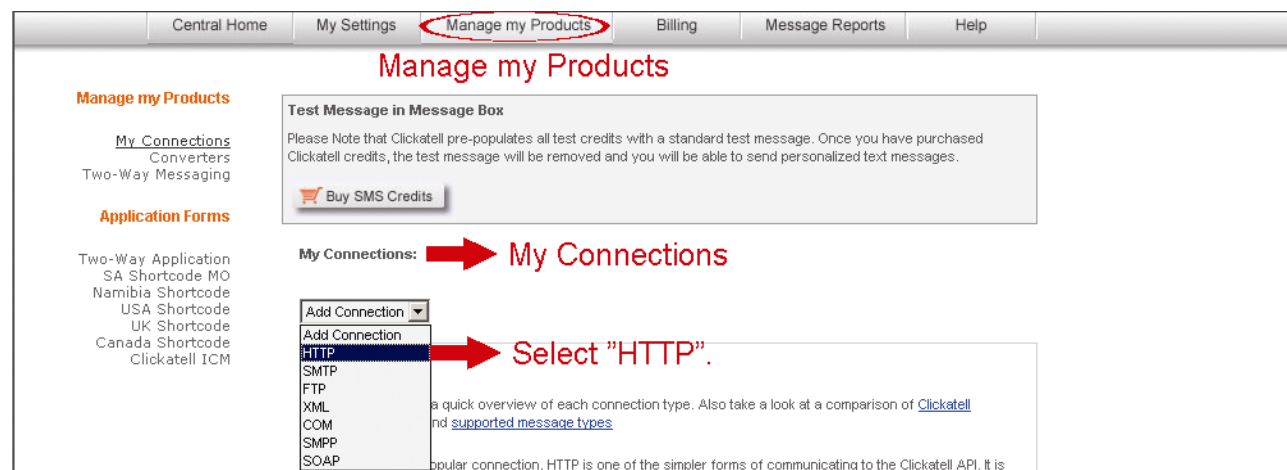

Your activation code will be sent to

If this is not your number, please retype your mobile number in the box above and click the "Send Activation Code" button.

Enter your activation code here:

Enter your mobile phone number, including your country code.

Step4: Go back to Clickatell, and click the tab “Manage my Products”.
Then, select “HTTP” from the drop-down list “My Connections”.

Manage my Products

Central Home | My Settings | **Manage my Products** | Billing | Message Reports | Help

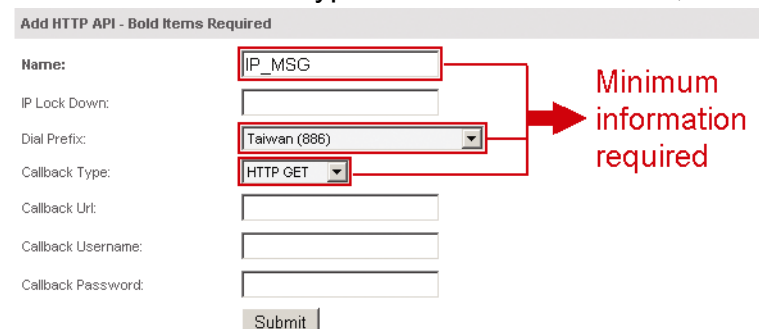

Manage my Products

My Connections:

Add Connection

Select "HTTP".

Step5: In “Add HTTP API”, enter a descriptive name for this service, and make sure the dial prefix is correct and callback type is “HTTP GET”. Then, click “Submit”.

Add HTTP API - Bold Items Required

Name:

IP Lock Down:

Dial Prefix:

Callback Type:

Callback Url:

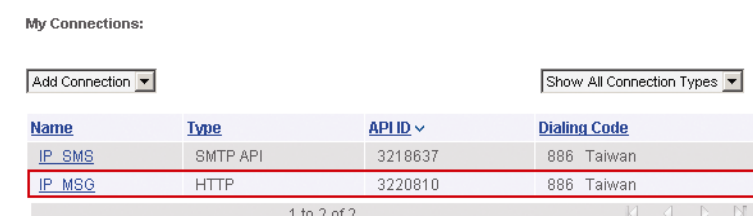

Callback Username:

Callback Password:

Minimum information required

Step5: You will get an API ID as follows.

Note: Note down the API ID for SMS notification setting later.

Name	Type	API ID	Dialing Code
IP_SMS	SMTP API	3218637	886 Taiwan
IP_MSG	HTTP	3220810	886 Taiwan

1 to 2 of 2

APPENDIX 3 BIT RATE TABLE FOR REFERENCE

The data below is for reference only.

The bit rates listed here may vary depending on the resolution, image quality & frame rate you choose, the complexity of your monitoring area, and how often the moving objects show in your monitoring area.

Testing Environment

- Place: Office Entrance
- Network translation: H.264

Static: No one coming in and out

Dynamic: One or two people coming in and out

Resolution	Quality	Frame Rate	(Dynamic) kbps	(Static) kbps
